EARL L. PARK, *Agricultural Statistician In Charge*

For statistical purposes, the counties of Indiana are grouped into nine Crop Reporting Districts (shown on the map at right). These groupings represent divisions of approximately equal size with similar soils, growing conditions and types of farming.

Crop Reporting Districts are used in the compilation of most reports. It is not possible to collect sufficient data for each county to make county estimates on a timely basis. It is possible to summarize data at a district level and weight districts together by production percentages to arrive at the best State estimates.

Many data series in the bulletin present estimates for Crop Reporting Districts. Some series are further broken down into county estimates within districts.

Indiana Crop Reporting Districts

WEATHER IN INDIANA DURING 1984

Following a record cold December, temperatures moderated during the first ten days of January, but another invasion of arctic air later in the month took temperatures as low as 20 to 29 below zero. Milder air returned by the end of the month, and temperatures averaged well above normal in February. A brief cold snap took minimums to zero to 5 below in north and central areas, but the most severe cold of the winter had passed in December and January, taking its toll in winter injury to fruit trees, especially peaches.

Precipitation was below normal in January and February, but snow cover that accumulated in December remained in place through early February. The cover was light in the south, but ranged up to 10 to 14 inches across the north. Protective cover was not sufficient in many areas to avert damage to wheat and other grasses. Ground was bare by the time another heavy snowfall blanketed the state in the last days of February. That cover gradually diminished through the first half of March. Rainfall ensued during late March and April to saturate soils and delay early spring field work. March and April temperatures reversed the mild trend of February, averaging well below normal and reducing drying potential. Below normal temperatures and ample rainfall in May aggravated field work and planting delays.

June presented a more favorable picture with temperatures above normal and rain totals below normal. Rains were spread throughout the month however, and many areas were hard pressed to find planting opportunities for soybeans.

Below normal temperatures in July kept heat stress at a minimum, but soil moisture shortages began to develop in many areas as rainfall became more sparse. Localized drought conditions persisted into August, especially in the northwest where above normal temperatures combined with below normal rain to stress crops at critical growth stages.

A shift to wet weather in September and October interfered with grain dry down and timely harvest. Above normal precipitation continued in November and December. Temperatures averaged near to a little below normal in November, and above normal in December. Moisture supplies were ample as Indiana soils entered mid-winter. The ground remained unfrozen and mostly free of snow through December.

--John W. Kottke-Agricultural Meteorologist, National Weather Service, Midwest Ag-Weather Service Center, West Lafayette, Indiana.

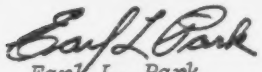
FOREWORD

This summary is the result of the continuing cooperation between the farmers and agribusinessmen of the State of Indiana, the Agricultural Experiment Station, Purdue University, and the Statistical Reporting Service of the U.S. Department of Agriculture. It provides the official estimates of agricultural production for 1984 together with comparison back to 1979.

Using data from the 1982 Census of Agriculture and other sources for comparison, all estimates for the period 1979-1983 were reviewed and in a few instances, where necessary, were revised. Included in this report are State estimates of acreage, yield, production, disposition, and other information related to crops; production and inventory numbers of livestock, including dairy and poultry; price and farm income data; labor and wage rates; and weather and crop progress data. County estimates for major crop and livestock items for 1984, 1983, and 1982 are also included. Historic State data from 1866 to 1979 and county crop estimates from 1923 through 1979 are also available upon request.

Farming is such an integral part of the national and world economy that it cannot function effectively without reliable information on which planning and marketing decisions can be based. To meet the needs of the farmers and others involved in agriculture, statistics are made available throughout the year in the form of weekly, bi-weekly, monthly, and quarterly reports. The reports and approximate dates of release together with ordering instructions are shown on the inside back cover of this publication.

I wish to acknowledge the valuable assistance of the many Indiana farmers and operators of agribusinesses who voluntarily provide the raw data from which the official estimates are established. A special thanks is extended to the field enumerators, telephone enumerators, and to all members of the office who had a part in carrying out the surveys, evaluating the results, and establishing the estimates which are presented in this publication.



Earl L. Park
Statistician, In Charge

The above estimates of Growing Degree Days (GDD) Normals are derived from normal temperatures at mid-month and the corresponding GDD. Temperature and GDD relationship come from a computer run of 20 years (1949-1968) using Indianapolis data. For example, a weekly average temperature of 60° F. resulted in 84 GDD. The basic formula is: 1/2 (max. T. - 50) + 1/2 (min T. - 50) = GDD for one day. The maximum temperature is not allowed to exceed 86 degrees F. Negative units are not accumulated.

CROP HIGHLIGHTS

Acreage: The 1984 acreage of the seven major field crops in Indiana totaled 12.8 million acres, an increase of 14 percent resulting from the PIK program reduced level of acreage of 1983. Except for oats, tobacco and fresh market tomatoes, virtually every crop major or minor was up from the previous year. Corn harvested for grain was up 29 percent; soybeans, up 10 percent; wheat, up 8 percent; rye, up 20 percent; hay, up 3 percent; potatoes, up 7 percent; and snap beans, up 47 percent. A 1 percent drop in other hay acres was more than offset by an 8 percent increase in alfalfa hay. Decreases of 14 percent were recorded for peppermint and 7 percent for spearmint. Oats, tobacco and fresh market and processing tomato acreages were the same as harvested in 1983.

Yields: While winter wheat yields, at 46 bushels per acre, dropped from the record high 51 bushels set in 1983, yields for virtually every other crop improved in 1984 because of the considerably better growing conditions. Corn yields averaged 117 bushels per acre, the second highest on record, compared with only 73 bushels in 1983. Soybean yields were 34.5 bushels, 3.5 bushels above the previous year. The 62 bushel oat yield compares with 57 bushels in 1983. Rye yields hit a record high at 28 bushels per acre, a bushel better than the previous record of 27 bushels set in 1971 and 1983.

Production: The 1984 production of virtually all crops except wheat and mint were up sharply from 1983. Acreage and yield were well above the previous year when government programs and drought conditions reduced both. The 1984 corn crop was more than double that of 1983 and moved Indiana into 4th place in production among states after placing 5th in 1983. Compared with 1983, soybean production was up 23 percent, hay up 24 percent, tobacco up 44 percent, oats up 9 percent, rye up 24 percent, sorghum up 119 percent, potatoes up 23 percent, and apples up 14 percent. Wheat production was off 2 percent from the record yielding 1983 crop. Peppermint was down 20 percent and spearmint was down 4 percent.

22/ 1,100 acres harvested in 1983 and 1984.

THE 1984 CROP SEASON IN INDIANA

The final estimate of the 1984 season places Indiana's corn production for the year at 705.5 million bushels, more than double the 1983 drought-stricken crop of 340.9 million bushels. Acres harvested totaled 6.03 million, up 29 percent from the PIK reduced acreage of 1983. Also contributing to the higher production was the 1984 yield of 117 bushels per acre, a 44 bushel increase from the previous year. The 1984 corn crop was valued at $1.87 billion, up 66 percent from 1983 even though the average price per bushel of $2.65 is much below the 1983 price of $3.30.

Soybean production totaled 150.1 million bushels, up 23 percent from 1983. The yield was 34.5 bushels, 3.5 bushels greater than in 1983 while the harvested acreage of 4.35 million acres was up 10 percent from the previous year. The value of the soybean crop was $923 million, down 5 percent from 1983 with an average price per bushel of $6.15. While soybean production was up, the $1.81 drop in average price per bushel accounted for the lower total value.

Hay production, at 2.34 million tons, increased by 24 percent from 1983. The 815,000 acres of hay harvested were 25,000 acres more than the previous year and the yield of 2.88 tons per acre was up .49 ton per acre from 1983. The value of the hay crop was $167.6 million, virtually unchanged from 1983 despite the higher production. The average value per ton, at $71.50 was a sharp drop from the $88.50 realized in 1983.

Tobacco production totaled 20.4 million pounds, up 56 percent from the previous year. Harvested acreage of 8,600 was up 6 percent from 1983 and the 2,370 pounds per acre yield was up 760 pounds from the previous year. The value of production was $38.4 million, making tobacco Indiana's fifth most valuable crop.

Apple production in 1984 totaled 64 million pounds, an increase of 14 percent from 1983. The total value of utilized production was $8.4 million, a 4 percent increase from the previous year.

Indiana's 1984 oats production was 5 million bushels, a 9 percent increase from the previous year. The yield was 62 bushels per acre, a 5 bushel advance from 1983. Harvested acreage, at 80,000, was unchanged from the previous year. The average price per bushel, at $2.00 was off just 6 cents from 1983.

The 1984 potato production in Indiana, at 966,000 cwt., was up 23 percent from 1983. The yield of 201 cwt. per acre was up considerably from the 175 cwt. of 1983 which was a 25 year low. Total acres harvested, at 4,800, was up 300 acres or 7 percent from the previous year. Potato prices, however, dropped 70 cents from 1983 averaging $7.05 per cwt.

Indiana peppermint production of 288 pounds of oil was down 20 percent from the previous year. Acres harvested totaled 7,200, down 1,200 acres from 1983. The yield of 40 pounds per acre was 3 pounds less than the previous year. Added to this the average price per pound, at $10.00 was off 40 cents. Spearmint production was also lower. At 156,000 pounds production was down 4 percent from 1983. Acreage harvested was 4,000, off 300 acres from the previous year. The 39 pound per acre yield, however, was one pound higher. The price per pound, at $13.80 was also higher comparing with $12.70 in 1983.

Peach production totaled only 700,000 pounds, an 87 percent drop from the 5.5 million pounds harvested in 1983. The price per pound was 34.2 cents per pound compared with 31.4 cents the previous year.

Sorghum grain production totaled 845,000 bushels, more than double the 385,000 bushels harvested in 1983. Acres har-

vested totaled 13,000 compared with only 7,000 acres harvested the previous year. The average price per bushel was $2.07 compared with $2.74 in 1983. Sorghum estimates for Indiana have been discontinued beginning with the 1985 crop.

The estimated rye production was 336,000 bushels, up 24 percent from the previous year. Rye acres for harvest was 12,000, a 2,000 acre increase from 1983. The 28 bushel per acre yield is a record high topping the 27 bushels realized in 1971 and 1983. The average price per bushel, at $2.25 was off 20 cents from 1983.

FRUIT CROP SUMMARY

Indiana's total apple production of 64 million pounds for 1984 was up 14 percent from 1983. The price per pound was 13.1 cents, down 14 percent from the previous year. Total value of the 1984 apple crop came to $8.4 million up 4 percent from 1983, but down 19 percent from the record high set in 1982.

Peach production in Indiana in 1984 was 700,000 pounds, down considerably from the 5.5 million pounds produced in 1983.

Flowering and Bedding Plants Summary
Indiana's 1984 Production and Value

The value of those cut flowers, potted plants and bedding plants estimated in Indiana totaled $21.1 million in 1984, 10 percent above the $19.2 million of 1981 when a survey of growers was last conducted. Items included in the total are: all chrysanthemums, cut roses, snapdragons, potted geraniums, potted poinsettias, potted lilies, potted hydrangeas, and bedding plants grown by commercial producers.

The number of commercial producers in Indiana has declined in recent years, especially those who grow chrysanthemums and snapdragons. This was accompanied by a substantial drop of $417,000 or 20 percent in the value of sales for all chrysanthemums between 1981 and 1984, but somewhat smaller declines for potted lilies, down 14 percent; potted hydrangeas, down 26 percent; and vegetable bedding plants, down 3 percent. Although growers sold 1 percent fewer potted geraniums their total value was up 17 percent. Potted poinsettias also showed a 17 percent increase in value of sales while flowering bedding plants were up 25 percent.

Of the cut flowers, growers sold 5 percent more hybrid tea rose blooms, 17 percent more sweetheart roses, and 7 percent more stems of snapdragons. The value of sales was up 11 percent for hybrid tea roses, up 26 percent for sweetheart roses and up 9 percent for snapdragons.

Estimates for 1982 and 1983 were discontinued for budgetary reasons but at the request of the industry were reinstated in 1984.

All data summarized reflect information furnished by commercial floricultural producers. A commercial floricultural producer is defined as one who has $10,000 or more in gross sales of cut flowers, flowering and foliage plants, bedding plants, or cultivated florists greens, and who produces one or more of the crops surveyed.

The "area used for production" is defined as the "gross" area used, including walkways and aisles. This includes that area used for growing floricultural crops under glass, plastic, cloth, lath, or outdoors. The area is counted only once if refilled several times with the same crop during the year, but if the area is refilled with different crops, it is reported under each crop grown.

2/ Equivalent wholesale value of sales.

3/ For roses, the data shown under Area for Production are number of plants in 1,000 plant units.

INDIANA LIVESTOCK SUMMARY

The total value of the four major species of livestock and poultry on Indiana farms January 1, 1985 (December 1, 1984 for swine and chickens) amounted to $1.042 billion, up 8 percent from the $967.5 million a year earlier.

Cattle numbers were up 2 percent in 1984 but value per head declined from $400 in 1984 to $395 on January 1, 1985. Total inventory value, at $659.7 million, increased 1 percent for cattle and calves. Cows and heifers that have calved totaled 636,000 head--1 percent above a year earlier. Of this total 439,000 were beef cows (up 3 percent) and 197,000 were milk cows, a record low for Indiana.

Hog numbers (December 1, 1984), at 4.3 million, were 2 percent above a year earlier and the average value per head increased from $64.00 in 1983 to $78.00 in 1984. This raised the total inventory value to $335.4 million, 25 percent more than a year ago. Indiana ranked third in the nation in the number of hogs on hand December 1.

Indiana sheep producers had 3 percent fewer sheep than a year earlier. Stock sheep totaled 100,000 head--a record low. Average value per head increased $1.00 from a year ago to $61.50 but inventory value at $6.8 million declined 1 percent.

The total value of the chicken inventory was $40.2 million in 1984, up 12 percent from 1983. Total chicken inventory, at 27.7 million, was a record high. With this inventory, Indiana ranked second in the nation. The value per bird decreased 5 cents from the previous year to $1.45 as of December 1, 1984.

HOGS AND PIGS

The total pig crop in 1984 was 6 percent smaller than the 1983 pig crop. Sows farrowed in 1984 decreased 7 percent but litter rate increased to an average of 7.65 compared with 7.53 in 1983. A 40 cent increase in average price per hundredweight was more than offset by a 9 percent decline in total pounds produced resulting in cash receipts 10 percent less than 1983. Gross income (cash receipts plus value of home consumption) also declined 10 percent from a year earlier.

Cattle

The number of cattle and calves marketed in 1984 declined 12 percent from a year earlier and was 10 percent below the 1982 level. The 1984 average price for cattle dropped 10 cents per cwt. to $54.20. Calf prices for 1984 averaged $52.00 per cwt. compared with $55.90 in 1983. Gross income (cash receipts plus value of home consumption) for 1984 totaled $294 million, down 20 percent from the $369 million a year earlier.

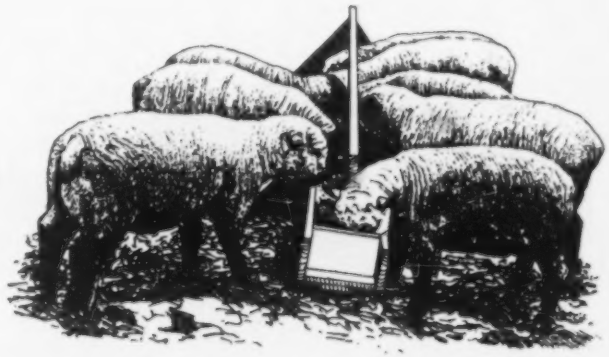
SHEEP, LAMB AND WOOL PRODUCTION

The number of sheep and lambs marketed in 1984 increased 4 percent to 79,000 head but the total pounds of sheep and lambs marketed was only slightly above the 1983 level. Cash receipts totaled $3.3 million, up 18 percent from $2.8 million in 1983. Gross income (cash receipts plus value of home consumption) totaled $3.7 million in 1984 compared with $3.0 million a year earlier. Sheep averaged $16.20 per cwt. and lambs averaged $53.60 per cwt. during 1984.

Lambs saved in 1984 increased 2 percent from the previous year to 102,000 head. The number of ewes one year old and older on hand January 1, 1984 declined 6 percent from 1983. Lamb crop per 100 ewes one year old and older was 129 during 1984 compared with 119 a year earlier.

Wool production declined 7 percent in 1984 to a record low 737,000 pounds. Sheep and lambs shorn totaled 109,000 head, 4 percent fewer than a year earlier. The average fleece weight was 6.8 pounds. Total value of shorn wool was $369,000--up 42 percent from the record low $260,000 a year earlier. Wool averaged 50 cents per pound in 1984.



Wool Production and Value
Indiana 1979-1984

Year	Number of Sheep Shorn	Average Weight Per Fleece	Total Production	Price Per Pound	Total Value of Production
	Thousands	Pounds	Thousand Pounds	Cents	Thousand Dollars
1979	121	7.3	883	68 1/	600
1980	117	7.2	846	67 2/	567
1981	128	7.1	908	67 2/	608

1/ Adjustments made for inshipments and changes in inventory.
2/ Excludes interfarm sales.
3/ Includes receipts from marketings of farm slaughtered meat.

CHICKEN, EGG AND TURKEY PRODUCTION

Cash receipts from eggs totaled $290.9 million in 1984, up 27 percent from a year earlier. The average number of layers at 19,737,000 was 9 percent greater than in 1983, but the average rate of lay was down 1 percent to 253 eggs per layer, resulting in an 8 percent increase in total egg production during 1984. The average price per dozen eggs received by producers was 70.0 cents compared with 59.5 cents a year earlier.

1/ Includes color classes combined to avoid disclosing individual operations. This color class includes Demi-Buff, Dark Brown, Violet, Pastel, Standard, and Pearl crosses and others.
2/ Included in "Other" to avoid disclosing individual operations.
3/ Estimates discontinued July 1981. Reinstated 1982.

FARM INCOME AND PRICES

Indiana farmers received $3.9 billion in cash receipts from farm marketings in 1984, a 3 percent drop from 1983. Cash receipts from crops were down 2 percent from the previous year while receipts from livestock and livestock products were down 4 percent. Marketing of crops at $2.2 billion, accounted for 55 percent of the total cash receipts in 1984 while livestock receipts, at $1.8 billion, accounted for the remaining 45 percent. In the previous year crop receipts accounted for 54 percent and livestock 46 percent of total cash receipts.

Meat animals in 1984 were again the leading source of income for Indiana farmers and amounted to $1.019 billion. Feed crops were a very close second at $1.015 billion. Corn is the major component of feed crops. Soybeans were third at $809.6 million. Poultry and eggs were the fourth leading contribution to farm income with $441.9 million and dairy products fifth with $305.8 million. These five commodity groups accounted for 91 percent of the 1984 cash receipts.

Cash receipts from meat animals were down 13 percent; feed crops were up fractionally; soybeans were down 7 percent; poultry and eggs were up 28 percent; dairy products down 4 percent; and food grains down 17 percent.

1/ The export shares are derived from contribution of Indiana to national output and sales. They do not show actual exports, but instead reflect the common stake of Indiana in the national export total.
2/ Includes barley, corn, oats, and sorghum grain.
3/ No longer published as a separate item. Indiana contributes less than 10% of the total exports for this item.
4/ Includes poultry. Prior to 1980 poultry included with Meats and Products.

Metric ton 2204.6 pounds
Short ton 2,000 pounds
Acre = 43,560 sq. ft. = .4047 hectare
Hectare = 2.471 acres = 10,000 sq. meters
1 Meter = 3.28 ft.

LIST OF AVAILABLE REPORTS

The Indiana Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers, and various other special reports. The reports containing such data and the approximate date of release are shown in the following table. These reports are available by submitting a subscription notice together with the subscription fee to:

Crop Reporting Board Publications
Room 5829 South Building
U.S. Department of Agriculture
Washington, D.C. 20250

MAKE CHECKS OR MONEY ORDER PAYABLE TO: USDA-SRS

Name of Report	Frequency Of Reports	Annual Subscription Fee
INDIANA AGRICULTURE REPORT: A four page consolidated report issued at the first and the middle of each month bringing together the latest statistics on crop production including: crop reports, grain stocks, cropping practices, crop varieties, tobacco, fruit crops, and vegetable crops; and livestock statistics covering: hogs and pigs, cattle and calves, sheep and lambs, wool, livestock slaughter, dairy, and chickens and eggs. Also covered are: prices received and paid by farmers, number of farms and land in farms, land values, cash receipts, and cold storage.	Semi-monthly	$10.00
WEATHER-CROP REPORT: A weekly progress report issued each Monday from April through November covering planting and harvesting activities, crop development, weather data, and timely crop management information.	Weekly	$12.00
COUNTY ESTIMATES: Issued each Spring, a county by county breakdown of harvested acres, yield and production for major crops and for livestock inventories.	Annual	$ 5.00
